The SEP-u within one year we achieved **<u>6.06%</u>** increase in efficiency compared on 03/01/2009, when the program was introduced.

In the months July, August and September 2009, shows an increase in value because the director changed the value of the estimates and put them much higher than they were at that time. In September it is then lowered again so that the situation was similar to that in October in June.   The fact is that this increase in value did not have any impact on the final score, which is only the beginning and the end of an era.

Calculated by deducting the average value of that increase, we obtain the following result.
